

Application No. : 10/780,350
Filed : February 16, 2004

IN THE SPECIFICATION

1. On page 1, line 1, please amend the title of the invention as follows:

5 -- ~~SERVER AND WIRELESS PHONE METHOD AND APPARATUS FOR~~
[CO-SOCKET] COSOCKET TELEPHONY --

2. On Page 1, line 3, directly after the title, please amend the text as follows:

10 --The present application is a continuation of U.S. patent application Serial
No. 09/120,499, filed on July 21, 1998 entitled "Method and apparatus for
co-socket [telephony.] telephony", now U.S. Patent No. 6,714,536.
15 Additionally, this application is related to U.S. patent application Serial
No. 10/, filed on April 29, 2004 entitled "Method and apparatus
for cosocket telephony." ~~Additionally, this application is related to U.S.~~
~~patent application Serial No. 09/575,802, filed May 22, 2000, entitled~~
~~"Server and wireless phone for co-socket telephony", incorporated herein by~~
20 ~~reference in its entirety.~~ --

3. On Page 66, lines 3-14 of the specification as filed (Abstract), please delete the
paragraph beginning with "Methods and apparatus" and ending with "internet services" in its
entirety, and insert the following in its place:

25 --Methods and apparatus for allowing a packet data connection to be
established by sending an indication of a network address through a
telephony path. In a first embodiment, a protocol stack initiates the
establishment of an Internet connection by sending a data segment through
30 a public switched telephone network (PSTN) telephony path and then
operates and maintains the Internet connection on separate packet
connection. Dialing digits are used to indicate the address of a remote
computer or wireless device via the telephony path. The invention also
enables mixed PSTN/internet multimedia telephone calls. In an exemplary
35 embodiment, when a point-to-point telephone PSTN connection is
established, a screen of information automatically appears at one or both
ends of the connection via the Internet. --
